GOOD?**

Bipolar disorder is a mental illness that causes dramatic shifts in a person's mood, ability to think clearly, and energy. People with bipolar experience high and low moods, known as mania and depression, which differ from the typical ups-and-downs most people experience.

If left untreated, bipolar disorder usually worsens. However, with a good treatment plan, many people can live well with the condition. NAMI outlines the symptoms, related conditions, causes, and how to seek treatment, along with video and podcast resources about bipolar disorder.
